

SMART | Project Flowchart

Application startup, sign-in, role-based workflows, and data services

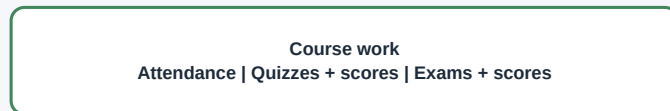

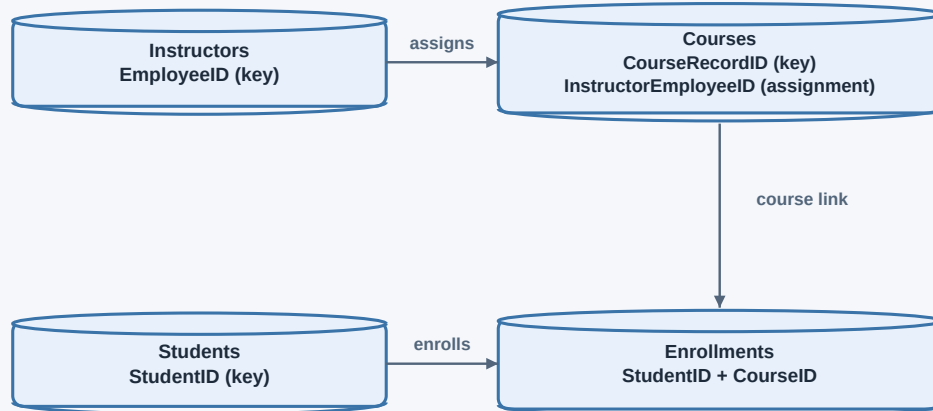

SMART | Schedule and Data Flow

How assigned courses become calendar blocks, and how operational records relate

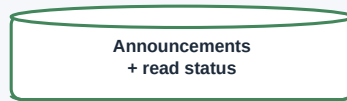

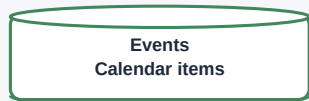

COURSE AND DATA RELATIONSHIPS

Core records live in SQL Server LocalDB (SMARTdb).

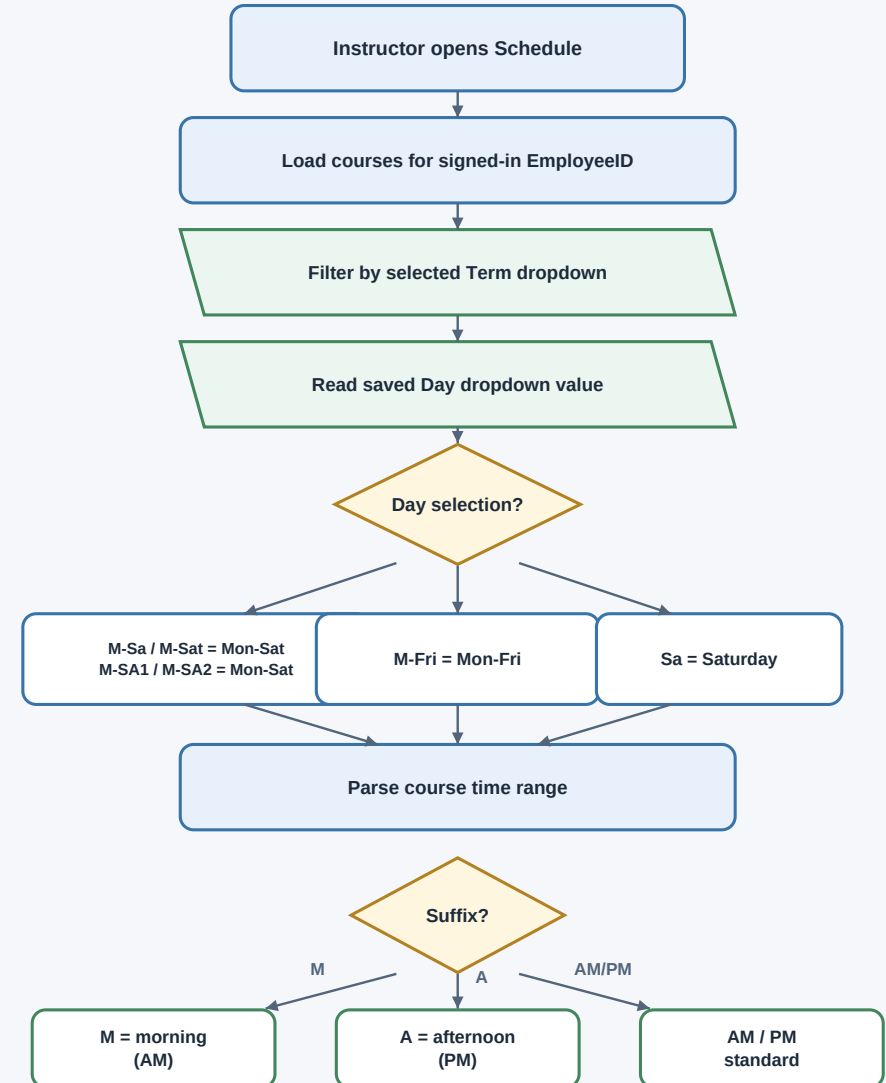

Course/student records are linked by their IDs.

Instructor-scoped records

Admin accounts are stored separately in the local SQLite Users database.

INSTRUCTOR SCHEDULE RENDERING

Parsed weekdays and times determine each course block's calendar position.
